EVLYN MONICA JOSEPH

DevOps Engineer

+91-9003779190 evlynmonicajoseph@gmail.com linkedin.com/in/miss-evlyn-monica-joseph/

PROFESSIONAL SUMMARY

DevOps Engineer with experience in designing and maintaining CI/CD pipelines, managing containerized workloads, and implementing infrastructure automation. Proficient in Azure cloud resources, Terraform, and monitoring tools like Grafana and Prometheus. Skilled in automating deployment workflows for AI/ML applications and enterprise data platforms.

WORK EXPERIENCE

Feb 2024 - Present

Software Engineer Trainee (DevOps)
Blackstraw.ai

- Designed and maintained CI/CD pipelines using Jenkins, GitHub Actions, and Bitbucket Pipelines to automate build, test, and deployment workflows for Al/ML applications.
- Managed containerized workloads using Docker and Kubernetes, including creating Dockerfiles, Helm charts, and handling deployments with Azure Cloud resources.
- Implemented infrastructure automation using laC tools such as Terraform and monitoring set up using Grafana.

NOTABLE ACHIEVEMENTS

1. Designed and maintained CI/CD pipelines using Jenkins, GitHub Actions, and Bitbucket Pipelines to automate build, test, and deployment workflows for AI/ML applications.
2. Implemented infrastructure automation using laC tools such as Terraform and monitoring set up using Grafana.
3. Developed and deployed a large-scale email extraction and validation platform for UK-based domains on Kubernetes clusters.
4. Automated microservice deployments using Docker Compose and code base is from Bitbucket pipelines.
5. Implemented zero-downtime deployments using blue-green or rolling deployment strategies.
6. Reduced application downtime by improving monitoring and alerting using tools like Prometheus, Grafana, or Alert Manager.

PROJECTS

Email Extraction

Developed and deployed a large-scale email extraction and validation platform for UK-based domains on Kubernetes clusters.
Integrated security scanning tools like Trivy, Grype, and SonarQube for DevSecOps and monitoring tools like Grafana, Prometheus, Loki, and Alert Manager.

EDP (Enterprise Data Platform)

Implemented infrastructure through Terraform deploying all Azure resources and automated CI/CD pipelines for Databricks notebooks and DLT pipelines.
Implemented Databricks Asset Bundles for packaging and deploying jobs and workflows.
Integrated Azure services (Key Vault, Storage, AAD) for secure data and environment management.

Al Platform

Deployed and hosted the full stack application on Virtual Machines using Nginx as a reverse proxy. Configured SSL certificates and domains for secure HTTPS communication and deployed via Jenkins. Automated microservice deployments using Docker Compose and Docker Swarm. Configured Jenkins with Bitbucket pipelines for continuous integration and delivery.

SKILLS

Bitbucket pipelines | **GitHub Actions** | **Docker** | **Git** | **Linux** | **Grafana, Prometheus, Loki** | **Kubernetes**

Nginx | **Terraform** | **Jenkins** | **PostgreSQL** | **Azure** | **Kafka**

EDUCATION

2020-2024

B.E. Computer Science & Engineering
Panimalar Institute of Technology, Chennai
CGPA- 8.89

ACCOMPLISHMENTS

Certifications

Azure Network Engineer Associate(AZ-700) - Microsoft 2025
